

Sunkits[®] – Clean and simple

Have you seen your electrical bill go up recently?

We bring you the solution!

Did you know that the more you consume the more you pay per kilowatt hour? Especially if your electric bill is greater than \$ 200 per month, getting solar is a smart move. It will cut off the peaks of the bill: Because solar is most cost effective in the higher rates above the baseline, you can save as much as 50 to 60 percent of your electrical expenses.

The good news: Sunkits® can make the bill go down!

Engineered by in-house experts and installed by our network of licensed contractors the process is simple and effective. It only takes 3 steps to a private solar system:

1. Call our toll free service number 800 94-SOLAR for local assistance.
2. Fill in a short questionnaire about your electric bill and the position of your rooftop with the assistance of our contractor. Based on this information, we can determine the best, most cost effective solution for you.
3. Approve the SolarWorld California customized proposal which will best meet your specific energy needs and optimize the financial benefits to you. And, let our contractor do the rest!

It would not be easier if you could fly!

The best part: You protect the environment!

A solar system produces energy without any noise or moving parts. It does not pollute the air or water, nor leaves dangerous substances for the next generation. It does not waste valuable energy resources: The basic element of a solar cell is silicon, most abundantly found in sand. The energy comes directly from the sun – a source that will last for some million years. More than that, the sun shines for free and does not send you a bill at the end of the day.

Sunkits® – The American system

The heart of the system, the solar modules, are 100 percent made in the US, for the US. We know exactly where all parts were manufactured, and can assure our customers of their high quality. Why are we so sure? Because we manufacture all parts of the solar value chain ourselves.

The proven solution

Our factories in Vancouver, Washington and in Camarillo, California are part of the photovoltaic history in the US. Starting 30 years ago, we have set the industry standard for quality, performance, innovation and reliability. Our 350 experienced employees know, that their product is well proven. This confidence is so strong that we were the first to back our modules with a 25-year warranty.

The independent spirit

We started as an independent small company with the dream of renewable energy being part of every day life. In 2006, we joined SolarWorld and became the biggest independent manufacturer of solar technology in the world – 100 per cent dedicated to solar. No distractions!

SolarWorld. And EveryDay is a SunDay.
